Arris dcx3200-m ir sensor location

The OSAT is an intrinsically safe infrared pyrometer. It measures the temperature of surfaces in hazardous areas without contact, and provides a direct 4-20 mA output. It is certified to ATEX, IECEx and TIIS standards.The OSAT is a small and compact low cost option for temperature measurement in hazardous locations. It uses Intrinsic Safety as the method of protection, whereas explosion proof pyrometers typically have bulky, and expensive housings. Typical Applications Petrochemical - condition monitoring Bearing, gearbox and motor housing surface temperatures in refineries and chemical plants can be monitored without contact, eliminating the need to replace contact probes that are easily damaged by vibration. Petrochemical - liquid storage and processing The sensor can be positioned in a Zone 0 environment such as the top of a tank of hazardous liquid or reactor, to measure the surface temperature of the liquid. Paper Dust in pulp, paper and packaging plants can create a fire and explosion hazard. The OSAT intrinsically safe pyrometer can be used for paper web temperature measurement and condition monitoring in ATEX and IECEx classified hazardous areas. Coal conveyors The OSAT fast 240 ms response time makes it ideal for measuring the surface temperature of coal on conveyors, as well as other bulk materials where there is an explosive dust hazard. Gas cylinder filling The surface temperature of cylinders of explosive gases is monitored with the OSAT as they are filled. The Group IIC, T4 classification makes it suitable for almost all gases including propane, butane, hydrogen and acetylene. The temperature of each cylinder is measured on the filling rig to help detect fault conditions in filling, to calculate the final filled volume (in conjunction with the pressure), to ensure the volume is repeatable, and to improve the filling rate. Automotive painting Solvents in automotive painting can create a gas explosion risk. The intrinsically safe OSAT may be used to monitor the temperature of containers and vessels, the surface temperature of liquids and powders, and the temperature of painted surfaces. Offshore The OSAT 316 stainless steel housing and intrinsically safe certification makes it well-suited for use on offshore platforms. As well as measuring the temperature of surfaces on the rig, it can be used to measure the temperature of the sea surface. General Specifications Output: 4 to 20 mA Maximum Temperature Span: 1000°C (1832°F) Minimum Temperature Span: 100°C (180°F) Field of View: See To Order chart on next page for details Accuracy: ±1°C or 1%, whichever is greater Repeatability: ±0.5°C or 0.5%, whichever is greater Emissivity Setting Range: 0.20 to 1.00 (pre-set to 0.95) Emissivity Setting Method: User configurable via USB interface Response Time, t90: 240 ms (90% response) Spectral Range: 8 to 14 μm Supply Voltage: 12 to 24 Vdc, ±5% Maximum Current Draw: 25 mA Construction: Stainless Steel 316 Dimensions: ø20 x length 150 mm (5.9") Mounting: M20 x 1.5 mm thread, length 46 mm (1.81"), supplied with two mounting nuts Cable Length: 5, 10 or 25 m (16.4, 32.8, 82') as standard (custom lengths also available) Weight: 475 g (1 lb), with 5 m (16.4') cable ENVIRONMENTAL Environmental Rating: NEMA 4 (IP65) Ambient Temperature Operating Range: 0 to 70°C (32 to 158°F) Relative Humidity: 95% non-condensing maximum HAZARDOUS AREA CLASSIFICATION ATEX Classification: Ex II 1GD IECEx Classification (Gas): Ex ia IIC T4 Ga IECEx Classification (Dust): Ex ia IIIC T135°C IP65 Da Ambient Temperature Rating: -20°C ≤Ta ≤70°C Maximum DC Input Voltage: Ui = 28V Maximum Input Current: Ii = 93 mA Maximum Input Power: Pi = 650 mW Maximum Internal Capacitance: Ci = 8 nF Maximum Internal Inductance: Li = 0 mH ATEX Certificate Number: CML 14ATEX2079 IECEx Certificate Number: IECEx CML 14.0032 Article ID : 00231295 / Last Modified : 27/04/2021 Follow these troubleshooting steps when the remote control is not operating properly or not responding at all Note: Because each of these steps represents a possible solution, check the function of the remote control after completing each step. NOTES: If your remote control has the (IR) mark, it is an infrared remote control. However not all infrared remote controls has the (IR) mark. If the only button on the remote control that does not work is the Microphone, follow the steps in the Voice Commands do not work on my remote article. Confirm the location of the Infrared (IR) remote control sensor, then note the following points: When using the remote, be sure to point it directly at the remote sensor on the device. NOTE: Depending on the TV model, the IR sensor is located on the left at the bottom, middle, and right of the TV screen. If there is an (IR) mark, the IR sensor is located next to the mark. For details, refer to the manual supplied with the product. Any obstacles that may be in the path between the remote and the device. Make sure that the remote infrared receiver/sensor located on the product has not been covered or obscured (by indoor plants, furnishings, etc.).When using a sound bar, make sure that it does not block the IR sensor of the TV.Glass enclosures, as well as fluorescent or halogen lights, may prevent the IR signal from reaching the TV.Low energy light bulbs have been known to interfere with remote frequencies. Try moving the products away from the lamp or the lamp away from the products. Make sure that a bright light or bright sunlight does not shine on the IR sensor. Bright light and bright sunlight can sometimes interfere with infrared signals, especially if the light is direct upon the IR sensor of the TV. Make sure that you don't press more than two remote control buttons at the same time. If you press multiple buttons at once, the remote control will not send an IR signal.Verify that the remote is sending an IR signal. By looking at the transmission unit of the infrared remote control through the camera of a mobile phone or digital camera, you can check whether or not the remote control is operating normally.Update the TV software to the latest version. There is a chance that symptoms may improve by updating to the latest software. NOTE: Operate using the buttons on the TV or another remote.Download and update processes will take time. The troubleshooting steps above should resolve the issue. If you completed all the steps and the issue is not resolved, service may be required or the remote may need to be replaced.
